% highlighted = ≥12% late delivery rate

LATE DELIVERY ANALYSIS

Over the three-year period (2016–2018), a total of 6,534 orders were delivered past their estimated date — 3 in 2016, 2,453 in 2017, and 4,078 in 2018, indicating a sharp upward trajectory. Within the 10-month window analysed, 7 of 10 months recorded 400+ late orders. The situation peaked in March 2018 with 1,328 late deliveries, representing approximately 20% of all late orders across the entire three-year dataset. This concentration points to systemic pressures — likely a combination of dispatch delays averaging 5 days before carrier handoff and in-transit logistics averaging 25 days for late orders — compared to the 12-day average for on-time deliveries. Most delays happen early in the year. Getting sellers to ship faster and ensuring delivery partners can handle the higher demand would be the most effective fix.

RECOMMENDATIONS & IMPROVEMENTS

- **Inventory & Supply Improvement**

  If a seller runs out of stock during high-demand periods, no amount of faster dispatch can help. Encouraging sellers to forecast demand and maintain adequate inventory before Q1 peaks would prevent delays from starting at the source.

- **Dispatch Improvement**

  Introduce seller dispatch deadlines with automated reminders, so orders are handed to delivery partners within 1–2 days instead of the current 5-day average.

- **Logistics Improvement**

  Olist relies heavily on Correios, which while wide-reaching, is known for slower delivery speeds especially outside major cities.

  Partner with additional regional carriers during January–March to handle the surge in orders, reducing the load on existing delivery networks and preventing last-mile delays.

KEY ANALYTICAL FINDINGS

- **State-Level Delivery Performance**

  Average delivery time calculated per Brazilian state using TIMESTAMP_DIFF — identifies geographic bottlenecks for logistics prioritisation.

- **Top Revenue Categories**

  Top 5 product categories ranked by total payment value (in millions BRL) — health & beauty and watches/gifts consistently lead revenue contribution.

- **6-Month Repeat Purchase Rate**

  LAG() window function used to identify customers who re-ordered within 180 days — a critical retention KPI for marketplace health.

- **High-Volume Seller Quality**

  Sellers with 50+ delivered orders ranked by average review score using a deduplicated CTE, surfacing reliable, high-performing marketplace partners.
